

Investment and Adoption Map - Cloud Foundation

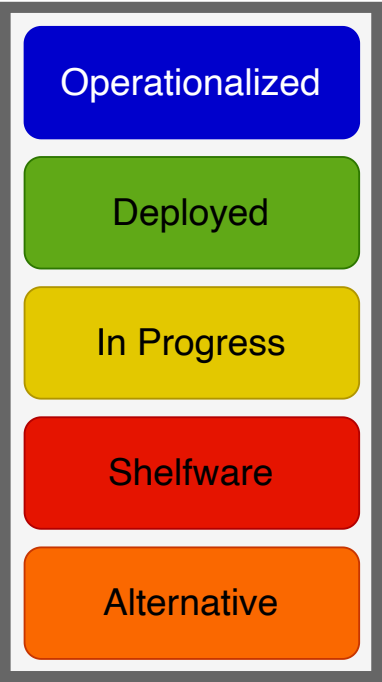

Color Map

- Increase VCF usage for managing hybrid workloads across multiple cloud providers.
- Promote the use of VMware Tanzu for containerized applications within VCF.
- Drive customers towards fully operational hybrid cloud environments.
- Encourage the use of VCF’s integrated security and compliance features.
- Increase awareness of the scalability benefits VCF brings to enterprise workloads.
- Foster an understanding of automated operations within VCF for improved efficiency
- Build a long-term partnership through regular reviews and advisory sessions to demonstrate how VMware’s solutions can continue to evolve with their business needs.
- Position VMware VCF as the foundation for supporting future cloud initiatives.

- **Broadcom Examples**
- Promote the use of vSphere with Tanzu for container orchestration.
- Foster customer understanding of GPU acceleration benefits for AI/ML.
- Increase the adoption of fault tolerance and HA features in mission-critical environments.
- Promote server consolidation to reduce customer physical infrastructure costs.
- Encourage optimization of resources through advanced compute management features.
- Increase vSphere utilization with advanced features and performance optimizations.
- Highlight Tanzu as the next step for container and cloud-native application support.
- Drive adoption of vSphere's edge computing capabilities for distributed locations.

VMWare HCI Mesh
(cross-cluster capacity sharing)

Data Persistence platform for modern stateful services

Data-at-rest and data-in-transit encryption

Integration

Aria Operations Integration

Integration with Tanzu
(CNS, CSI)

- Broadcom Examples

Drive adoption of vSAN as the primary storage solution for SDS environments.

Promote disaster recovery and replication features within vSAN.

Foster an understanding of policy-based management to simplify storage administration.

Increase adoption of vSAN's integration with Kubernetes for containerized storage.

Encourage full migration from traditional SAN/NAS systems to vSAN.

Advocate for cost savings through consolidation of storage infrastructure with vSAN.

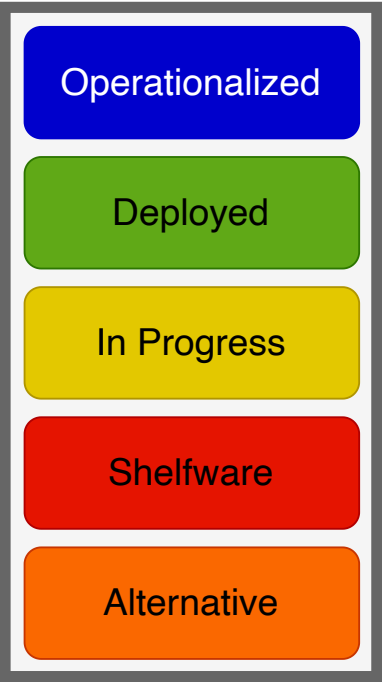

Promote native data protection by leveraging vSphere Replication and VMware Site Recovery Manager (SRM) for disaster recovery, backups, and compliance.

Upgrade from traditional vSAN to vSAN ESA to take advantage of simplified management, performance enhancements, and better hardware efficiency.

Work closely with the customer to position vSAN as a future investment, showing the value of transitioning to a hyper-converged infrastructure in terms of cost savings, agility, and simplicity.

Help the customer understand the hardware requirements and plan for future investments.

Color Map

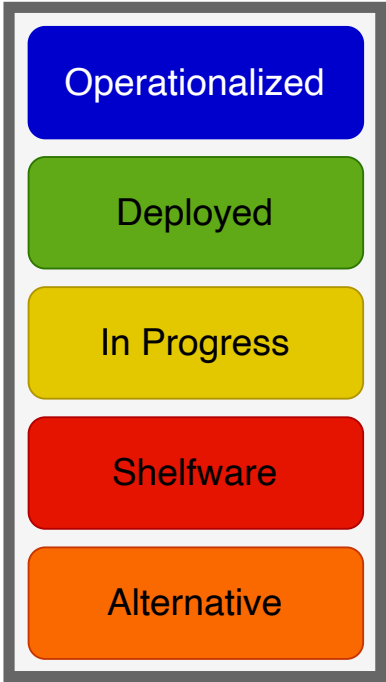

- Broadcom Examples
- Accelerate adoption of NSX's advanced security features.
- Promote the integration of NSX with Aria Operations for Networks to improve network health monitoring.
- Drive awareness of the benefits of virtualized networking in simplifying operations.
- Encourage full implementation of NSX's security capabilities across customer environments.
- Increase adoption of network automation tools within NSX.
- Increase NSX footprint across the data center.
- Promote Network Insights for comprehensive network monitoring and troubleshooting.

Third-Party Content Packs

- Broadcom Examples
- Increase customer usage of Cloud Foundation Operations.
- Drive adoption of automated operations management for improved efficiency.
- Encourage best practices for centralized operational control and analytics.
- Promote integration with third-party tools to enhance operational visibility.
- Encourage the use of Cloud Foundation Operations to simplify compliance reporting.
- Expand the deployment of Cloud Foundation Operations and Log Insight across all aspects of the customer's infrastructure.
- Highlight predictive analytics as a way to enhance operational efficiency and reduce downtime.

Investment and Adoption Map - Aria Automation

Color Map

Customer Logo Here

- Broadcom Examples
-
- Promote the use of automation features to reduce operational overhead.
- Drive adoption of self-service capabilities for improved customer satisfaction.
- Foster customer proficiency in infrastructure-as-code practices.
- Increase awareness of automated lifecycle management capabilities in VCF.
- Encourage integration of automation with DevOps tools for streamlined workflows.
- Drive Automation as the backbone for reducing operational complexity and empowering self-service IT.
- Highlight automation’s impact on reducing costs and improving agility.
